

2017

Thanks to

**VARBERGS
KOMMUN**

The i-mop & Varbergs Kommun (Städavdelningen) have saved 44.640 liter clean drinking water made available with Made Blue, and mirrored those liters to where they are needed most.

44.640 liters

Thanks to using i-mop machines the customer saves a lot of water. Made Blue mirrors the water used or saved by the usage of the i-mop, with generating equal amounts of clean water in developing countries. Made Blue calculates the water footprint of the impact of using i-mop machines at your destination and mirrors those liters (or the liters saved) one-on-one for people who need this water. In a certified, measurable and traceable environment, backed by renown charities and partner organisations.

This sub certificate is a part of the yearly certificate that Future Cleaning Technologies receives from Made Blue. FCT mirrors every liter that is saved by using i-mop machines. The amount of liters mentioned on this sub certificate is an estimate of the water usage in 2017 of the machines that have been implemented at the customers locations.
